DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-11, drawn to Hot Insertion of processing cards, classified in class 710, subclass 302.
 - II. Claims 12-17, drawn to a connector, classified in class 307, subclass 147.
 - III. Claims 18-20, drawn to connector impedance, classified in class 323, subclass 233.
 - IV. Claims 21-30, drawn to equalizing voltages, classified in class 323, subclass 272.
2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the subcombination contains the specifics of a connector system . The subcombination has separate utility such as a general connection system for connecting any types of electronic modules.
3. Inventions I through II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the

different inventions are a card insertion system (I), a general electronics connector system (II) and a resistive load (III).

4. Inventions I through III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are a general method and system for equalizing voltage (IV), load resistance (III), general electronic connection system (II) and a card insertion system (I).

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
